М,

Example 1; SEQ ID NO 10; 345pp; English.

The present invention describes a 254PID6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the corresponds to a subsequence of the ORF, where the acid open reading frame (ORF) sequence which encodes the complete stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists assentially of or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO.3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein contact is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 934 homologous or identical to an entire amino acid sequence of Pl; (2) a polymucleotide that is a full complement of the polymucleotide described above; (4) composition in a sample, the presence of a 254PID6B-related polymucleotide; (6) a composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a phyrident of the protein of the pro or a diagnostic agent to a cell that expresses the protein of P1; and (12) inhibiting growth, reproduction or survival of cancer cells that express the protein of P1. 254PlD6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful for treating and detecting cancer. The present sequence represents the human 254PlD6B v.3, which is used in the exemplification of the present invention. The human 254PlD6B gene is located on chromosome 6p22.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel isolated SECP (secreted protein)

Complypeptide. The polypeptide of the invention demonstrates

Comeroprofective, relaxant, antithyrodd, antidiabetic, cytostatic,

dermatological, immunosuppressive, antiinflammatory, thyromimetic,

antiallergic, cerebroprotective, gastrointestinal, hepatotropic,

compliant anticonouslant, antiparkinsonian, antibacterial,

antiparasitic, fungicide, protozoadide, virucide, uropathic,

antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic,

antirheumatic, cardiant, cardiovascular, anti-HIV and nootropic

continities. The polypeptide may be useful in diagnoshing, preventing and

treating disorders including neurodegenerative disorders such as

Compotonic dystrophy and catatonia, endocrine disorders particularly

chotosomy and Grave's disease, cancers such as leukaemia, cervical or

breast cancer, immunological disorders including scleroderma, systemic

chreates and Grave's disease, cancers such as leukaemia, cervical

chous srythemacrosus and allergies, gastrointestinal disorders

continually Crohn's disease, renal disorders eg. Goodpasture's

cyndrome, infections particularly viral, bacterial, fungal, parasitic,

protozoal, helminthic, cardiovascular disorders including atherosclerosis

and hepatic diseases particularly cirrhosis. The polynucleotides may be

cused to create humanised or transgenic animals, as well during gene

cused to create humanised or transgenic animals, as well during gene

This invention relates to novel membrane proteins that are associated with differentiation and/ or metabolic function of adipocytes, in particular of mouse origin. Specifically, it refers to the isolated nucleic acid molecules encoding all or part of these proteins, appropriate antibodies and screening assays useful for the development of drug compositions derived thereof. The present invention describes these compositions as useful for the treatment of diseases associated with abnormalities of adipocyte function, such that they can be used to prevent, treat or diagnose obesity, hypertension, hyperlipaemia, diabetes and arteriosclerosis. Accordingly, they exhibit anorectic, antidiabetic, antiarteriosclerotic, antilipaemic and hypotensive activities. This polypeptide is a murine membrane protein sequence related to adipocyte function of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            466
